EXAMINER

RAMAN, USHA

ART UNIT

PAPER NUMBER

2424

MAIL DATE

DELIVERY MODE

04/13/2011

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 09/725,987	Applicant(s) YOSHIDA ET AL.	
	Examiner USHA RAMAN	Art Unit 2424	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 May 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 26,27,29,30 and 32-40 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 26,27,29,30 and 32-40 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 12, 2010 has been entered.

Response to Arguments

2. Applicant's arguments filed May 12, 2010 have been fully considered but they are not persuasive.

Applicant's arguments (see Remark, page 15) stating that, "Hassell's volume name indicates the disc on which programs are stored rather than address information of the program on the broadcast station". Examiner respectfully disagrees. The independent claims as amended recite "storing address information of digital content to the broadcast station". Killian discloses program information comprising address information of digital content to the broadcast station (col. 5, lines 10-21), wherein Hassell further discloses that program information including such hyper links comprising address information can be stored on removable recording medium [0052]. Accordingly the system as modified in view of Hassell and Fullerton reads on the recited claim limitations.

For at least the reasons stated above, the rejection is maintained.

Claim Rejections - 35 USC § 103

Art Unit: 2424

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 26-27, 29-30, 32-36, and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Killian (US Pat. 6,163,316) in view of Hassell (US Pat. 2004/0128685) and Fullerton et al. (US PG Pub. 2005/0223407).

With regards to claims 26, 29, 32, and 34, Killian discloses a receiver comprising:

A receiving means (10) for receiving digital content and attributive information (see column 3 lines 59-67, column 4 lines 1-7) from a broadcast station (col. 3, lines 50-58), the receiving means including an infra-red radiation receiving unit (col. 4, lines 47-50, wherein infrared signals from remote control are input to receiver 44 of receiver 10 and therefore the receiver 10 comprises a IR receiving unit 44);

Remote controller means (42), which includes an infrared emitting unit (col. 4, lines 47-50, wherein because infrared signals from remote control are input to receiver 44, the remote control emits IR signals to the receiver 44) for remotely controlling the receiving means (col. 4, lines 61-64, e.g. remotely controlling receiving means by changing channels) by transmitting an infrared radiation signal (i.e. input signals from the remote control to the receiving unit are infrared signals) from the infrared radiation emitting unit to the infrared radiation receiving unit (44) in

the receiving means, wherein the remote controller means is separate from the receiving means (see fig. 1, wherein 42 is illustrated as being "separate" from 10).

Selecting means for comparing a first selective information with the attributive information (see column 2 lines 19-22 and column 17 lines 29-35)

A filtering means for filtering the attributive information on the basis of the first selective information to select the digital content (see column 10 lines 60-67, column 15 lines 5-12); and

Recording means for recording on the receiver digital content selected on the basis of the first selective information (column 15 lines 5-12), wherein Killian additionally discloses that program information pertaining to programs can comprise address information of digital content to the broadcast station (col. 5, lines 10-21).

Killian does not disclose the receiver further comprising a removable recording medium control means for recording at least one of the selected digital content, and for storing address information of digital content to the broadcast station, on the removable recording medium, wherein the selected digital content recorded on the removable recording medium is reproducible on the display unit of the remote controller means. Killian additionally is silent on wherein the remote controller means comprises a display unit and a removable recording medium, wherein the digital content recorded on the removable recording medium can be reproduced on the display of the remote controller means.

In an analogous art, Hassell discloses a method of recording programs on a removable storage medium [0019] [0020]. Hassell accordingly discloses a

Art Unit: 2424

removable recording medium control means for recording at least one selected digital content on the removable recording medium. Hassell additionally discloses that storing the program information (i.e. associated program data) pertaining to recorded programs on the removable storage medium [0052], wherein such program information may comprise internet links.

Fullerton discloses portable remote control (UTV remote) that is capable of commanding channel selection/channel change of a receiver (i.e. base unit, [0006], [0008], fig. 6), wherein the portable remote control has the ability to render video for display [0034]. Fullerton further notes that such a portable remote control maybe implemented on a laptop computer [0023] capable of playing back stored or taped movie [0034]. While Fullerton is silent that the laptop computer comprises removable recording medium, examiner takes Official Notice that laptop computer comprising removable recording medium and capable of reading the removable recording medium were well known in the art at the time of the invention.

It would have been obvious to one of ordinary skill in the art to modify the system in view of Hassell and Fullerton's teachings by facilitating a removable recording medium for storing program and program information therein, wherein the program information additionally comprises address information of digital content to the broadcast station so that viewer can access internet information pertaining to selected digital content. It would have been obvious to one of ordinary skill in the art to further modify the remote controller of Killian in view of Fullerton by employing a remote controller with display such as a laptop computer that can effect channel

Art Unit: 2424

change and display programming on the “remote controller” and further modify it to incorporate a removable recording medium so that the “remote controller” can additionally render for display programs stored in the recording medium.

With regards to claims 27, 30, 33 and 35, the system as modified in view of Hassell further comprises removable recordable medium means (see [0008]) configured to store client identification (user information stored in user fields, see [0045]).

With regards to claim 36, the modified system discloses the step of a user storing programs to digital storage device (see Hassell: [0084]) and providing to playback of contents at the storage device at a remote controller (Fullerton: [0034]). The modified system further discloses the step of automatically without receiving user intervention and playing user media (once the storage medium is loaded) based on address information of digital content and client identification stored on the address information of digital content (Hassell: [0089]). The modified system additionally comprises multiple remote controller devices as taught by Fullerton (see fig. 6), wherein each remote controller device maybe a laptop comprising a removable recording medium and capable of reading the removable recording medium, as discussed above in claim 1. Accordingly, the removable medium can be rendered for playback in a first remote controller or second remote controller means.

With regards to claim 38, the modified system further discloses wherein the parameter of the first selective information is set to exclude programs from being

Art Unit: 2424

recorded and reproduced. See Killian: column 14 lines 42-55 and column 16 lines 55-57.

5. Claim 37 is rejected under 35 U.S.C. 103(a) as being unpatentable over Killian (US Pat. 6,163,316) in view of Hassell (US Pat. 2004/0128685) and Fullerton et al. (US PG Pub. 2005/022340) and further in view of Herz (5,758,257)

With regards to claim 37, the system as modified is silent on the step of analyzing user's taste based on a reproduced program and changing weighting of a value of a parameter of the first selective information based on the analysis of user's taste thereby changing the filter configured to filter the attributive information to select the digital content. In a related art of suggesting programs, Herz discloses a method of analyzing suggested programs that a user has watched or not watched in order to adjust weights associated with the customer profile. See column 25 lines 45-48, column 26 lines 63-column 27 line 2. It would have been obvious to one of ordinary skill in the art to further modify the system in view of Herz's teachings by adjusting user profiles based on programs so that suggestion algorithms can be updated by monitoring suggested programs were watched.

6. Claims 39 and 40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Killian (US Pat. 6,163,316) in view of Hassell (US Pat. 2004/0128685) and Fullerton et al. (US PG Pub. 2005/022340) and further in view of Zigmond et al. (6,698,020)

With regards to claim 39, while the system as modified discloses displaying commercials during commercial breaks (Killian: col. 5, lines 62-66), Killian is silent

Art Unit: 2424

on the step of selecting commercial information based on the first selective information and storing the commercial in a dedicated area of the recording medium.

Zigmond discloses the step of storing commercials that match a user profile (see column 19 lines 55-61).

It would have been obvious to one of ordinary skill in the art to further modify the system in view of Zigmond teachings by recording advertisements that match the viewer profile (first selective information) so that the system can display targeted advertisements during commercial breaks.

With regards to claim 40, the stored commercial in the modified system is reproduced within a predetermined time frame (upon detecting triggering event, see Zigmond: column 20 lines 4-7).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to USHA RAMAN whose telephone number is (571)272-7380. The examiner can normally be reached on Mon-Wed, Fri: 5:00am-9:00am; Thu: 5:00am-7:00am and 12:00pm-2:00pm.

Art Unit: 2424

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Pankaj Kumar can be reached on (571) 272-3011. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
